

AI Manager Activation Playbook

A manager operating guide for building AI into how teams work.

— WELCOME!

Managers make AI **real.**

Every investment Fabletics makes in AI becomes meaningful when managers help their teams work differently. You do not need to become an AI expert — you need to become the leader who helps your team continuously improve.

An operating model, not another program

This playbook introduces the operating model behind five leadership behaviors and points you to the practical tools that put them into practice.

It is not a technical manual, and it is not another training program. It is a practical guide for leading AI-enabled improvement with your team.

MANAGERS...

identify opportunities

improve workflows

strengthen quality

build new habits

recognize progress

That is Manager Activation.

WHY MANAGERS MATTER

Managers translate AI strategy into daily team practice.

They decide where AI gets discussed, where time gets protected, what gets improved, what gets recognized, and what becomes a team habit.

TOOLS & TRAINING

create **awareness**.

MANAGERS

turn awareness into repeated practice.

Managers lead the improvement process, not every answer.

Managers do not need to identify every AI opportunity, design every solution, or become the technical expert for every tool. Their responsibility is to create the process and conditions that help the team find meaningful opportunities, test better approaches, and learn from the results.

MANAGERS ARE RESPONSIBLE FOR

- ✓ Creating focus around work that matters
- ✓ Asking questions that help the team examine the work
- ✓ Giving employees time and permission to experiment
- ✓ Setting clear expectations for quality and judgment
- ✓ Coaching the team through testing and refinement
- ✓ Reinforcing and sharing practices that work

MANAGERS ARE NOT RESPONSIBLE FOR

- Arriving with a complete solution
- Personally redesigning every workflow
- Knowing every available AI tool
- Approving every small experiment before it begins
- Turning every idea into a formal project

From building AI capability to improving how teams work

From individual use to team improvement.

WHAT WE HAVE BUILT: INDIVIDUAL CAPABILITY

Training

Experimentation

Personal productivity

One-off use cases

WHAT MANAGERS ACTIVATE

1. Improve the Work

Apply AI to workflows, decisions, and important outputs.

2. Better Ways of Working

Turn improvements into repeatable team practices.

Managers activate the shift by creating focus, time, expectations, and reinforcement.

Build improvement into existing routines

The goal is not another AI meeting. It is making improvement part of how the team already operates. Lead with the question.

TEAM MEETINGS Surface opportunities, learning, and useful practices. ASK THE TEAM "Where did AI help us improve the work this week?"	1:1's Coach application and help remove barriers. ASK THE TEAM "Where could you apply what you already know to work differently?"	WORK REVIEWS Examine quality, judgment, and results. ASK THE TEAM "What became stronger, and what still requires human judgment?"	PLANNING CONVERSATIONS Choose the next opportunity and clarify the outcome. ASK THE TEAM "Which part of this work would be most valuable to improve?"	AI WEEKLY LEARNING HOUR Protected time — Fridays, 10–11AM PT — for AI learning. ASK THE TEAM "How will your team use this time?"
--	---	---	---	--

How to use this playbook

Read the model first, then act with your team. Start with the work, not the tool — one opportunity is enough to begin.

01 Read to understand

Understand the expectations and the operating model behind the behaviors.

02 Use the toolkit to act

Reach for the toolkit when you are ready to take action with your team.

03 Start with one, then build

Begin with one behavior and one opportunity. Build the habit before expanding.

04 Use sprint kits for structure

Use the sprint kits when you want a structured meeting-in-a-box experience.

Every Team Has an Opportunity to Turn AI Capability Into Better Work

Assume your team already knows enough about AI to begin. The leadership question is *how to help them apply that capability more intentionally.*

WORKFLOW IMPROVEMENT

Improve **how work gets done.**

CAPABILITY ENHANCEMENT

Improve **the quality of the work.**

Improve how work gets done

Use when work is repetitive, slow, manual, inconsistent, or full of friction — and redesign the flow so the same work takes less effort next time.

USE IT WHEN:

Work is repetitive, slow, manual, inconsistent, or full of friction.

SUCCESS LOOKS LIKE:

The same work takes less effort next time.

Improve the quality of the work

Use this path when work needs stronger thinking, better decisions, clearer communication, or higher-quality outputs.

SUCCESS LOOKS LIKE:

The work itself is better than before.

Managers activate the shift by leading the work and leading the team.

LEAD THE WORK

Help the team use AI to improve the work:

- Surface meaningful opportunities
- Rethink how work should happen
- Improve quality and value of important work
- Turn improvements into reusable practices

+

LEAD THE TEAM

Create the conditions that help improvement take root:

- Make space for experimentation and learning
- Set clear expectations
- Coach application and reinforce new habits
- Recognize progress and share what works

CAPABILITY ALONE does not change how the organization works. **MANAGERS ACTIVATE THE SHIFT** by creating focus, time, expectations, and reinforcement.

The Manager Activation Loop

Five connected behaviors, one continuous loop — two lead the work, three lead the team.

Five behaviors turn AI leadership into everyday management practice.

THE CONTINUOUS CYCLE

Identify → **Redesign** ↻

Spot the opportunity, improve the work, and make it stick — then begin again as work changes.

THE STANDING CONDITIONS

Enable + **Reinforce** + **Recognize**

People need time, safety, clarity, and visible reinforcement to keep experimenting and improving.

The toolkit, mapped to the loop

Start with a leadership need, pick the resource, and see the behavior it supports — grouped by the two halves of the loop.

LEAD THE WORK

	Identify / Redesign
Workflow Mapping Guide Use when — you are unsure which workflow to improve first.	IDENTIFY
Workflow Improvement Sprint Kit Use when — work is repetitive, slow, manual, or inconsistent.	REDESIGN
Workflow Improvement Canvas + Cards Use when — running the sprint or working independently.	REDESIGN
Capability Enhancement Sprint Kit Use when — work needs stronger thinking or higher-quality outputs.	REDESIGN
Capability Enhancement Canvas + Cards Use when — improving existing work or creating new value.	REDESIGN
AI Work Quality Review Guide Use when — reviewing important AI-assisted outputs.	REDESIGN

LEAD THE TEAM

	Reinforce · Enable · Recognize
AI as Thought Partner Guide Use when — AI should improve judgment, not just produce content.	ENABLE
Psychological Safety + Guardrails Guide Use when — the team needs permission and clarity to experiment.	ENABLE
Team AI Review Use when — making AI improvement part of the team rhythm.	REINFORCE
Manager Conversation Guide Use when — reinforcing and recognizing AI through conversations.	REINFORCE / RECOGNIZE

Start with the work, not the tool. One opportunity is enough to begin.

SECTION · THE FIVE BEHAVIORS

The Five Behaviors

Managers build AI-enabled improvement through five connected behaviors. Focus on one at a time.

01

LEAD THE WORK

IDENTIFY

Spot opportunities where AI can create meaningful value.

WHY IT MATTERS

The best AI improvements begin with the right opportunity. Managers help teams look at the work, name what is worth improving, and prioritize the places where AI can create the most value.

WHAT GOOD LOOKS LIKE

- Regularly asks where work feels harder than it should.
- Helps the team distinguish workflow opportunities from capability opportunities.
- Starts with the work and the desired outcome, not the tool.
- Prioritizes the highest-value opportunities instead of chasing every idea.
- Revisits opportunities as work changes.

THE MINDSET SHIFT

“My team will figure out where AI fits if they need it.”

→

“I create the space for my team to identify and prioritize opportunities together.”

Manager prompt – what one small action will you take this week?

START HERE: RESOURCES

Workflow Mapping Guide

Find repeatable work and friction points.

Sprint Selector

Decide Workflow vs Capability.

Team AI Review

Surface patterns and recurring blockers.

02

LEAD THE WORK

REDESIGN

Improve how work gets done and how value gets created.

WHY IT MATTERS

Redesign turns opportunities into better ways of working — sometimes simplifying a repeatable workflow, sometimes strengthening the quality of an important work product. The goal is to create something the team can use again.

WHAT GOOD LOOKS LIKE

- Improves one opportunity at a time.
- Chooses the right sprint for the improvement goal.
- Uses the canvas to guide the work instead of jumping straight to tools.
- Turns useful outputs into reusable assets, practices, or examples.
- Refines what works after real use.

THE MINDSET SHIFT

~~“AI is something we add to the way we already work.”~~

→

“AI is a reason to rethink how the work should happen.”

Manager prompt – what one small action will you take this week?

START HERE: RESOURCES

Workflow Improvement Sprint Kit

Improve a repeatable workflow.

Capability Enhancement Sprint Kit

Stronger thinking, decisions, outputs.

Asset Library Guidance

Save what works for reuse.

03 REINFORCE

Make AI part of everyday team habits.

WHY IT MATTERS

Reinforcement is how experimentation becomes practice. AI becomes part of how the team works when it shows up in recurring conversations, operating rhythms, reviews, and follow-through.

WHAT GOOD LOOKS LIKE

- Keeps AI visible in team meetings and 1:1s.
- Protects time for learning and experimentation.
- Uses Team AI Reviews to look for patterns, not just isolated wins.
- Encourages people to share what they tried and what they learned.
- Connects improvements to actual business outcomes.

THE MINDSET SHIFT

~~"I have already talked about AI with my team."~~ → "AI is part of how our team works every week."

Manager prompt – what one small action will you take this week?

START HERE: RESOURCES

Team AI Review

Monthly wins, blockers, next steps.

Manager Conversation Guide

Team meeting and 1:1 prompts.

Operating Rhythms

Weekly, monthly, quarterly habits.

Create the conditions that make experimentation possible.

WHY IT MATTERS

Teams adopt AI faster when expectations are clear, time is protected, and experimentation feels safe. Enablement is not just access to tools — it is the environment that makes using those tools realistic.

WHAT GOOD LOOKS LIKE

- Protects real time for learning and experimentation.
- Clarifies what is in bounds and what requires checking first.
- Normalizes experiments that do not work.
- Coaches through mistakes with curiosity.
- Encourages higher-quality AI use, not just more AI use.

THE MINDSET SHIFT

“Everyone has access, so the team is enabled.”

→

“Everyone has permission, time, support, and guardrails.”

Manager prompt — what one small action will you take this week?

START HERE: RESOURCES

Psychological Safety Guide

Confidence to experiment.

AI Guardrails

Clarify what is green, yellow, or red.

AI as Thought Partner Guide

Use AI to improve thinking.

05

LEAD THE TEAM

RECOGNIZE

Reinforce progress by celebrating meaningful AI wins.

WHY IT MATTERS

Recognition turns isolated improvements into shared practices. When managers name what worked, why it mattered, and how others can use it, they help successful behaviors spread.

WHAT GOOD LOOKS LIKE

- Recognizes specific behaviors and outcomes.
- Celebrates small improvements as well as big wins.
- Shares useful examples beyond the immediate team.
- Connects people solving similar problems.
- Uses recognition to reinforce the habits the team should repeat.

THE MINDSET SHIFT

“If the work is good, people will notice.” → “I actively spot, name, and share AI wins.”

Manager prompt – what one small action will you take this week?

START HERE: RESOURCES

Manager Conversation Guide

Recognition and sharing language.

Team AI Review

Surface and discuss team wins.

Recognition & Sharing Resources

Share a win more broadly.

— BUILD THE HABIT

The Manager Activation Rhythm

The five behaviors become easier when they are built into a simple rhythm. The goal is not another standing meeting or initiative — use the moments that already exist to keep improvement visible.

Every week, every month, every quarter

Every week

Small conversations

Ask your team what they are trying, what is working, and what could be improved.

Every month

Sprint or review

Run a sprint or Team AI Review. Choose one opportunity, work on it, and capture what is worth reusing.

Every quarter

Reflect & reset

Reflect, recognize, and reset priorities. Share what worked and choose the next focus area.

Start small. Build consistency. Let it grow.

Month 1 / 30 Days

Learn the system and start the conversation

Read this playbook. Introduce AI as a standing topic with your team. Use the Sprint Selector to identify one opportunity. Decide on a Workflow or Capability Sprint.

Month 2 / 60 Days

Run the work and capture what helps

Run your first sprint. Use the relevant canvas and Quick Start Cards. Capture one reusable asset, practice, or example. Bring one learning into a meeting or 1:1.

Month 3 / 90 Days

Build the habit

Hold your first Team AI Review. Recognize one meaningful AI win. Update your team asset library or examples. Choose the next improvement opportunity.

Team AI Scorecard

The AI Team Review Scorecard is an **optional** monthly check in that helps you see where **progress** is happening, where **support** is still needed, and which **wins** are worth capturing.

MANAGER ACTIVATION - MONTHLY PULSE

AI Team Review Scorecard

A quick monthly check on how you're leading AI with your team. Fill it in during your Team AI Review — it takes less than 10 minutes.

MANAGER

TEAM

MONTH

PART 1 - BEHAVIOR CHECK

One quick read on each behavior in the Manager Activation Loop.

Identify

Are we spotting the right opportunities?

We named at least one opportunity to improve this month

Doing this

Starting to

Not yet

We know if it's a Workflow or Capability opportunity

Doing this

Starting to

Not yet

I made space for the team to surface ideas, not just me

Doing this

Starting to

Not yet

Redesign

Are we improving the work, not just adding AI to it?

We ran or continued a sprint (Workflow or Capability)

Doing this

Starting to

Not yet

We rethought the process or output, not just bolted on a tool

Doing this

Starting to

Not yet

Something from this month is reusable (prompt, template, SOP, asset)

Doing this

Starting to

Not yet

Reinforce

Is AI part of how we already operate?

AI came up in a team meeting or 1:1 this month

Doing this

Starting to

Not yet

We protected time for learning or experimentation

Doing this

Starting to

Not yet

We looked back at wins, blockers, and next steps

Doing this

Starting to

Not yet

Enable

Do people feel safe and clear to experiment?

The team knows what's green, yellow, and red to try

Doing this

Starting to

Not yet

I coached through at least one mistake with curiosity, not correction

Doing this

Starting to

Not yet

Time and permission to experiment felt real, not theoretical

Doing this

Starting to

Not yet

Recognize

Are we celebrating what's working?

I called out at least one specific AI win by name

Doing this

Starting to

Not yet

The win was shared beyond just our team (Champs, Show & Tell, cross-functional team share-out, etc.)

Doing this

Starting to

Not yet

Recognition pointed to a behavior we want repeated

Doing this

Starting to

Not yet

PART 2 - IMPROVEMENT TRACKER

Where the team's Workflow and Capability work actually stands.

Workflow Improvement

Improving how the work gets done.

CURRENT OPPORTUNITY

What are you improving?

STATUS

Not started

WHAT CHANGED BECAUSE OF IT

One or two lines

Capability Enhancement

Improving the quality of the work produced.

CURRENT OPPORTUNITY

What are you improving?

STATUS

Not started

WHAT CHANGED BECAUSE OF IT

One or two lines

THIS MONTH'S WIN

What's worth recognizing?

NEXT MONTH'S FOCUS

What's next?

WHAT'S BLOCKING US, IF ANYTHING

Optional

— CLOSING THOUGHT

AI is the accelerator. Managers are the **activation system**.

Manager Activation is not about using AI more. It is about helping teams improve how work gets done and the quality of the work they produce.

Practical Guides

For Managers · 2026 · Confidential

Practical Guides

These field guides are short, action-oriented tools built around specific manager tasks. Read them in any order, skip around, or work through all of them at once. Come back to any guide whenever you need it.

Not sure where to start? Use this:

Workflow Mapping Guide: If you're trying to figure out where your team should use AI.

AI Work Quality Review Guide: If you want to know whether AI is actually making your team's work better.

Using AI to Think Through Problems: If you want to use AI to think through a problem, a decision, or a strategy.

Manager Conversation Guide: If you want to get better at talking to your team about AI, setting expectations, coaching, or recognizing wins.

Reusable Asset Guidance: If you want to build a library of prompts, templates, and examples your team can reuse over time.

Improving the Work

Three guides to help you identify AI opportunities, evaluate quality, and think through problems with AI.

Workflow Mapping Guide

Why It Matters

Most AI adoption stalls because people don't know where to start. The instinct is to look for a tool first. The better instinct is to look at the work first. Where does your team spend time on things that are repetitive, inconsistent, or slower than they should be? That's where AI tends to create the most value, and workflow mapping is how you find it.

What Good Looks Like

A manager who does this well can point to a specific workflow their team runs regularly, name where it slows down or gets inconsistent, and describe at least one place AI could realistically help. They've tried it, they know what changed, and they have something reusable to show for it. They're not trying to AI-enable everything at once. They picked one workflow, improved it, and built from there.

Good workflow candidates are repeatable, time-consuming or high volume, information-heavy, quality-dependent, or currently manual and recreated from scratch each time.

How To Do It

- 1. Pick one workflow.** Start with something your team does at least weekly or monthly, not the most complex process you have.
- 2. Break it into major steps.** Write down what actually happens, in order, not the ideal version.
- 3. Find the friction.** Where does it slow down? Where do people wait, search, redo, or guess?
- 4. Identify AI opportunities.** Look at friction points involving gathering information, synthesizing, or drafting something pattern-based.
- 5. Prioritize one improvement.** Pick the highest-impact, most feasible opportunity and run a sprint on it.

Manager Prompts

- Walk me through exactly what you do when you start this task. What's the first thing you open?

- Where do you find yourself doing the same thing over and over?
- What part of this would you automate if you could?
- Where does this process produce the most inconsistent results?
- If this took half the time, what would you do with the rest?

Example

A marketing manager notices her team spends 90 minutes each week pulling performance data from three platforms and writing commentary for the weekly report. The data gathering is manual, the formatting is repetitive, and the commentary follows a pattern. She maps the workflow, builds a prompt template for the formatting and drafting, and total time drops from 90 minutes to 25. The recovered time goes toward analysis they previously skipped.

Quick Reference Checklist

Use this while you're mapping the workflow with your team.

- Picked one workflow that's repeatable and time-consuming
- Described what actually happens, not the ideal version
- Found at least two friction points
- Identified a realistic AI opportunity
- Prioritized one improvement and scheduled a sprint to act on it

AI Work Quality Review Guide

Why It Matters

AI makes work faster. The real measure is whether it's making work better. You want outputs that are sharper, and more insightful, and effective than what your team was producing before, not just quicker to produce.

That means evaluating differently. Asking, "is this actually better than what we'd have produced without it." A single output can look great while the overall process creates new problems, so it's worth checking whether the approach scales or just shifts the bottleneck elsewhere.

What Good Looks Like

A manager who does this well evaluates AI-assisted work the same way they'd evaluate any work. They set aside how it was made and ask: is this better, and specifically how? They catch work that's technically fine but hasn't actually improved, and they use what they notice to coach their team toward stronger outputs over time.

Look across accuracy, clarity, insight, completeness, actionability, and creativity, depending on what matters most for the type of work.

How To Do It

- 1. Define what better looks like before you review.** What would a strong version of this look like?
- 2. Evaluate the output on its own merits.** Does it meet the bar? Where does it fall short?
- 3. Compare to the previous baseline.** Better in what way, and by how much?
- 4. Check whether the process scales,** or whether it just moves the bottleneck to review and approval.
- 5. Give specific feedback** tied to what's missing, not just "make it better."

Manager Prompts

Questions to ask yourself or your team when reviewing AI-assisted work.

- Judge this the way you'd judge any piece of work. Is it actually better than what we'd have produced before?
- What's specifically stronger here? What's still missing?
- Did AI sharpen the thinking, or just make it look more polished?
- Does speeding this up create more work for whoever reviews or approves it next?

Example

A merchandising analyst's AI-drafted reports get cleaner formatting but the insight doesn't improve, they describe what happened without saying why or what to do about it. Her manager flags it directly, and they revise the prompt to explicitly ask for a "so what" and a recommendation. The next draft is sharper, and the revised prompt goes into the asset library.

Quick Reference Checklist

Use this when reviewing AI-assisted work with your team

- Defined what a strong output looks like before reviewing
- Evaluated on its own merits, then compared to baseline
- Checked whether the approach scales or shifts the bottleneck
- Gave specific feedback and flagged strong examples for reuse

Using AI to Think Through Problems

Why It Matters

The biggest opportunity for AI is early, while you're still figuring out the problem, the approach, or the decision. Used this way, AI sharpens your judgment rather than replacing it.

What Good Looks Like

A manager who does this well brings AI into a problem before deciding what to do about it. They use it to stress-test their reasoning, explore options they might dismiss too quickly, or get a clearer picture of a messy situation. They don't outsource the thinking, they use AI to think harder.

How To Do It

- 1. Describe the situation before asking for a solution.** What's the problem, what do you know, what have you already ruled out?
- 2. Ask it to push back.** What are the weaknesses here? What am I not seeing?
- 3. Use it to explore options and tradeoffs honestly,** not to make the decision for you.
- 4. Stress-test before you commit.** Where does this fall apart?
- 5. Keep the judgment.** The response is a starting point, not an answer.

Manager Prompts

- "Here's a problem I'm trying to solve: [describe]. What am I not considering?"
- "Here's my current thinking: [describe]. What are the weaknesses in this approach?"
- "I'm deciding between these two options: [describe]. What are the real tradeoffs?"
- "Here's a plan I'm about to share with my team. Where does this fall apart?"

Example

Before a quarterly business review, a manager wants to make a case for shifting her team's resourcing. She describes the situation to AI, shares her argument, and asks what a skeptic would say. It surfaces two objections she hadn't addressed. She builds those into her prep, and the conversation goes better because she walked in ready.

Quick Reference Checklist

Use this when bringing a problem or decision to AI)

- Described the situation with enough context to be useful
- Asked AI to push back, not just support your thinking
- Explored tradeoffs and stress-tested before committing
- Kept the judgment and the decision

Leading the Team

One guide to help you have the right conversations, set expectations, and coach your team through AI adoption.

Manager Conversation Guide

Why It Matters

How managers talk about AI with their teams determines whether it takes hold. A manager who sets clear expectations and responds well when things don't go as planned creates a team that improves. These conversations also connect to AI Effectiveness ratings this cycle, so getting them right matters, but they don't need to be long. They need to be consistent.

What Good Looks Like

A manager who does this well is direct about expectations without being heavy-handed, makes space for different reactions, and asks more than they tell. When someone shares a win, they name what was good specifically. When someone is stuck, they coach rather than solve.

How To Do It

Setting expectations: This is the conversation you have before everything else, so don't assume your team already knows what's expected. Be transparent that AI Effectiveness is being rated this cycle. Expect a range of reactions: enthusiastic, willing but unsure, and genuinely concerned, and more. Make room for all of them. Point your team to the Weekly AI Learning Hour, AI Office Hours, and Start.ai.

Team meetings: Two to three minutes, weekly, is enough. The goal is to keep AI visible and normal, not to run a formal review. Recognize wins specifically and flag reusable assets when you hear about them.

1:1s: Focus on the work, not the concept of AI use. Not every 1:1 needs this, but checking in regularly early on keeps people from quietly falling behind. Coach toward one concrete next step rather than pushing enthusiasm someone doesn't feel.

Psychological safety: People won't experiment if they don't feel safe trying. Share your own AI misses and respond to failed experiments with curiosity, not correction. Know the guardrails and share them clearly: never put customer data, financials, or confidential material into unapproved tools; check first on sensitive or unreleased material; brainstorming, research, and approved-tool writing help are fine to explore freely.

Manager Prompts

Setting expectations:

- "I want to talk about where we are with AI and what I'm expecting going forward."
- "AI Effectiveness is being rated this cycle. I want you to hear that from me directly."

Team meetings:

- "Any AI wins from this week worth sharing?"
- "What did you try that didn't quite work?"

1:1s:

- "Where have you been using AI lately? What's working, what's frustrating?"
- "What would help you make more progress here?"

Psychological safety:

- "Trying something and having it not work out is completely fine."
- "Here's something I tried recently that didn't work..."

Example

A manager inherits a team with mixed AI adoption. She opens with a direct, low-pressure conversation about expectations and resources. Over the following weeks she asks one AI question per team meeting, coaches a hesitant team member through a low-stakes trial in a 1:1, and treats a team member's tone-deaf AI-drafted email as a shared lesson rather than a mistake to call out. Adoption spreads without anyone feeling pressured.

Quick Reference Checklist

Use this as an ongoing check on how you're leading AI conversations with your team.

- Set expectations directly, including that AI Effectiveness is being rated
- Asking at least one AI question per team meeting
- Coaching 1:1s based on the work, not the concept of AI
- Reinforced psychological safety and reviewed the guardrails

Building for Reuse

One guide to help you build a library of prompts, templates, and examples your team can reuse over time.

Reusable Asset Guidance

Why It Matters

Individual AI wins compound across a team only when what one person figures out gets saved somewhere others can find it. A shared asset library turns one-off solutions into standing practice.

What Good Looks Like

A manager who does this well only saves what gets reused. They store things where the team already works, not in a separate system nobody checks, and they treat the library as something the team returns to, not a folder built once and forgotten.

How To Do It

- 1. Watch for repeat use.** If a prompt gets used more than a couple times, it belongs in the library.
- 2. Turn frequent prompts into something more permanent,** like a customGPT that already carries the context, so people just enter the specifics.
- 3. Store the output, not the conversation.** Save the finished artifact in SharePoint like any other document. The exception is an ongoing, diary-style use case where the conversation itself builds over time.
- 4. Come in with a starting point.** Explore AI yourself before rolling this out so your team has something to follow.
- 5. Tie library review to a rhythm you already have,** like your monthly working session.

Manager Prompts

- Is there anything from this week worth saving or sharing?
- Is this something you'd use again, or was it a one-time fix?
- Would this be more useful as a customGPT than a prompt you retype each time?

Example

A merchandising analyst keeps rewriting the same prompt to summarize weekly data. Her manager notices the pattern and suggests turning it into a customGPT that already knows the report format. The manager flags it in the team meeting, and another analyst adopts it the same week.

Quick Reference Checklist

Use this when deciding whether something belongs in your team's asset library.

- Identified a prompt or process getting reused regularly
- Decided whether it's worth a customGPT or just a saved template
- Stored the output where the team already keeps documents
- Tied library review to an existing team rhythm
